DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 36-44 and 46-52 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 36 is drawn toward a data network comprising means for communicating on a common network level, means for exchanging resource requests by using the first addressing scheme and means for performing an address mapping between the first and second addressing schemes. Since there is no "special definition" in the spec regarding the means, and the means could be accomplished by a software between multiple protocols within a computer, it is therefore that the means can be interpreted to be software per se. As such, software per se does not establish a statutory category of invention.

Claims 37-44 and 46-52, which are dependent on claim 36, are rejected for similar reasons as stated above.

Correction is required.

REASONS FOR ALLOWANCE

3. Claims 53-68 and 70 will be allowed.
4. The following is an examiner's statement of reasons for allowance:

The closest prior art (Mark Pub. No. 2003/0118019) teaches an multi-protocol label switching (MPLS) packet network connecting two different IP networks using a packet transport protocol providing a protocol type indicator (see, e.g., abstract).

The prior art of record does not provide for nor suggests providing for as follows:

A method in a data network implemented by a first network level having a first addressing scheme and at least a second network level having a second addressing scheme, the method comprising the steps of:

exchanging resource requests by using the first addressing scheme, the NRMs of the first group and the second group admitting new resource requests based at least in part on a total amount of available resources, an amount of resources currently reserved by previous reservations, and an amount of resources requested in the new resource requests (see, e.g., specification, page 3, lines 1-11); and

performing an address mapping between the first and second addressing schemes so that a set of resources that is used by a reservation in the second group, controlled and known by the second group, is aggregated into a single resource in the first group of NRMs (see, e.g., specification, pages 19-21).

For these reasons, in conjunction with the other limitations of the independent claim, puts this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
